

Rife International

Client: Montgomery County, MD

Project: Boyds Aquatic Center

Location: Boyds, MD

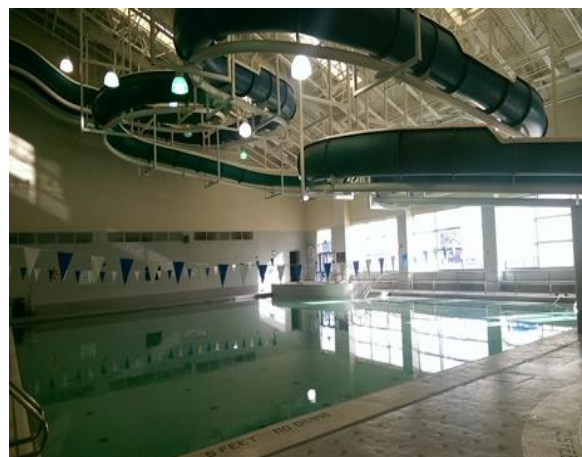

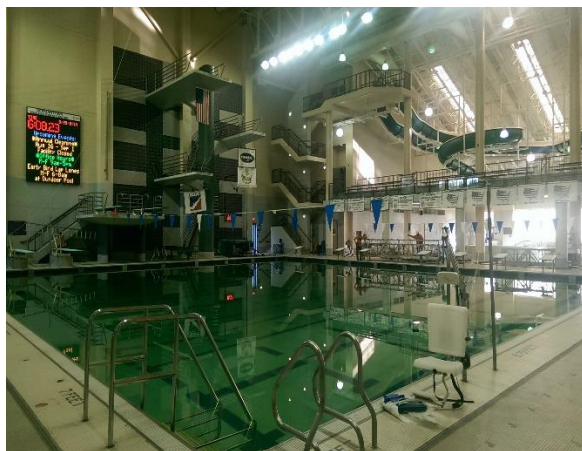

Rife International provided labor and materials for the replacement of lighting fixtures at Boyds Aquatic Center located at 18000 Central Park Circle, Boyds, MD.

Rife replaced several lights at the pool with 400 watt MH BT28, 400w MH PS, and 175w MH Med Base lighting fixtures.

The state-of-the-art indoor pool center is approximately 60,000 square feet and includes competition recreation, leisure and two separate hydrotherapy pools, as well as diving platforms and a water slide.

Rife had 3 days to replace 100 lights before the pool would be open to the public. The project required our professionals to use a lift and harnesses to reach lights at an approximately 55

foot ceiling. Rife made sure all lights met code regulations and the swim center was safe for the public to use.
