

Rife International

Client: General Services Administration (GSA)

Client: United States Patent and Trademark Office (PTO)

Project: Child Care Center Renovations

Location: Alexandria, Virginia

Rife International served as a General Contractor for the General Services Administration (GSA). Rife provided design/build and construction management services for renovating U.S Patent and Trademark Child Care Center kitchen counter tops and dishwasher. Under this project Rife International managed coordination of the design process to fully address the clients' needs by working with selected product vendors to find a close match for the existing counter top.

Additionally, Rife International identified and managed specialized subcontractors' work, including demolition, Electrical, Plumbing and Mill work. Rife International first coordinated the selection of product replacement with the vendor and the owner, resolving the design issues and assisting the project officers in clarifying the deliverables.

Our ability to add value in design development and construction management ensured the successful completion of this and other projects.
